

Mega Menus for SharePoint

- Efficient
- Compact
- Compatible

Responsive Feature Rich Enhanced Navigation, Multi-Column, Multi-Images; Linkable: tabs, headers, images, w/tool tips
No code or extra lists to manage.

Having usable and accurate navigation is essential to the success of your SharePoint site. SharePoint Mega Menus will transform your site using native SharePoint navigation configured via your browser. You can have as many links as you need and yet not clutter your navigation. Make life easier for your users and IT department with SharePoint MegaMenus!

EFFICIENT MENUS

COMPACT NAVIGATION

COMPATIBLE UI

☑ EFFICIENT

Reduce The Number Of Clicks

Users generally dread having to click more than twice to get to their desired information. MegaMenus achieves that goal by providing a way for users to get to content that may be two or three levels deep, all from the global navigation menu. Reach sub-sites, sub-pages and even external links all from one place.

☑ COMPACT

Powerful Navigation In a Small Package

Mega Menus are small, yet pack a LOT of items in an elegant structure. No need for custom code or learning a new navigation system. With just a small learning curve, you can organize links into columns and add clear headers to the out-of-the-box SharePoint navigation.

☑ COMPATIBLE

Usable in All of Today's Browsers

Based on universally accepted standards in Javascript, Mega Menus will function across a number of different browsers and platforms. This solution has been tested for compatibility with the latest browsers, both for workstations and mobile devices.

Mega Menus for SharePoint

SharePoint Made Easy To Use and Intuitive

Mega Menus are a fantastic way to present SharePoint global navigation items in a clean and organized way that improves SharePoint's native global navigation with images, and multi-column groupings. They enhance out of the box functionality without losing any native features. Simply add a few specially-formatted links to your existing navigation to define groups. These groups are used to populate the menus. Images can be used for links as well!

Easily Customized For Your Business

Mega Menus transform out of the box navigation into state of the art menus that contain captions and images. Greatly enhances the user experience. It uses the built-in SharePoint navigation structure so there is no extra work to manage it!

SharePoint's default navigation provides a general view of the overall structure of your site, however it does not allow you to provide users with easy access to the wealth of content that is buried deep within your site. Furthermore, deciding where content should be located for intuitive user navigation can be challenging. With Mega Menus it's easy and very flexible to make your content easy to find:

- Mobile and touch-based device support
- Allow departments and users to manage their own navigation
- Cross site collection navigation
- Unique navigation at site collection or sub-site level
- Manage navigation across all sites from a single location
- No custom HTML or CSS required, but can be styled with CSS to your taste
- Design and style menus directly from the browser
- Uses out-of-the-box native SharePoint navigation
- Users see only what they have security access to see!
- Easily organize navigation into tabs, groups, columns, and add images
- No coding or fiddling with master pages

System Requirements

Server: Microsoft SharePoint 2013, SharePoint 2010

Client: All web browsers with latest editions.
